SupplySMART®

Automated Supply Management System

How Much Loss does your hospital endure concerning medical supply consumption?

SupplySMART® Automated Supply Management System is a practical and automated supply dispensing station that checks out medical supplies at the usage location.

It enables the optimization of the management processes of the medical supplies warehouse and tracking of materials from warehouse to the wards and patient use, it improves the quality of patient care and reduces costs of the hospital.

System Features

- Medical supplies available on the ward can only be accessed by authorized personnel through BIO ID authentication.

- Lighted Path illuminated guidance helps the user to find materials easily.

- Touch-to-Take technology enables easy and fast access to necessary supplies.

- Once a nurse takes a supply and removes it out of the system that item is dropped from the inventory and the patient is exclusively invoiced for the material taken for himself/herself. Once the material is returned to the system, it is stocked again in the system and is deducted from the patient's bill.

- The system sends an automatic request to the main warehouse for materials at minimum level or below that.

- The system calculates quantitative inventory cycle speed and optimizes inventory levels.

- The **SupplySMART®** configuration solution can be extended by adding auxiliary Supply and CathTowers.

STOCKART

Solutions that Create Value for all health professionals

STOCKART® solutions offer an increase in the quality of healthcare, patient and employee satisfaction. They enable your institution to track, report and analyze all medical transactions and allow long-term planning. They offer you the opportunity to decrease your running costs without affecting the quality of patient care, ultimately adding value to the healthcare sector and its professionals.

How do we relieve you of your worries concerning patient safety?

- By having all kinds of necessary medical supplies available on the wards
- By warning users with visual warnings, product specific warning codes and expiry dates removing supplies to ensure patient safety
- By warning users of expiry dates before removing supplies

How do we facilitate employee satisfaction?

- By defining kits to enable them to access several supplies from the system at a time
- By ensuring that all kinds of necessary supplies are available on the wards
- By sending automatic requests to the warehouse for materials at minimum level or below that
- By relieving nurses of inventory duties
- By reducing the busy traffic of medical supplies dispensing from the warehouse to the wards
- By submitting invoice and inventory operations simultaneously

How do we reduce your costs?

- By including medical supply inventories of the ward within secure access through BIO ID authentication
- By improving security measures for the supplies required
- By reducing waste supplies arising from expiry dates
- By enabling electronic monitoring of invoice processes and inventory management
- By automating managements of returns
- By including consignment, re-use and bill-only products within automatic supply management system
- By automating the management of cost center products
- By enabling cost management and charge capture

With SupplySMART® **All Data is at Your Fingertips...**

SMARTMaestro

The integration tool that enables **SupplySMART®** products and other information systems used actively within the hospital to work together as a single system.

SMARTReport

An advanced reporting portal preserving the operations performed with **SupplySMART®** products and presenting these to users.

SMARTDashboard

A business intelligence platform transforming all data generated by **SupplySMART®** products into integrated and meaningful data and presenting these to users.
